

Sprint 1 Daily Scrum

14 July

[14/07, 07:00] Sikhanyiso: So for coding the website I would suggest that we have a look at frameworks like Django and others they have some of the stuff built in, they help organize the project in one place, they are really easy to work with so it's worth looking into them and deciding from there.

[14/07, 08:55] Donald: I'll check Django out

[14/07, 09:56] Mongezi: did anyone send Rylan the email with group names?

[14/07, 11:14] Donald: Not yet, we wanted to know if everyone is sorted

[14/07, 11:15] Donald: Okay thanks

[14/07, 11:16] Donald: I guess you can send ... I do have a device too

16 July

[16/07, 11:21] Donald: We need to setup a meeting with Rylan neh?

[16/07, 11:24] MJ: Day ?

[16/07, 11:25] Donald: Tomorrow ?

[16/07, 11:27] MJ: How? Tuesday, and until then we check out this

[16/07, 11:27] Donald: No problem?

[16/07, 11:28] MJ: Oh shit the labs are on Tuesday now, then we can do Monday how? that ?

[16/07, 11:32] Mongezi: The meeting with Rylan?

[16/07, 11:32] MJ: Yea

[16/07, 11:35] Mongezi: Okay cool. Do we email him or use Google Meets like before?

[16/07, 11:36] MJ: Let's do both since he hasn't said anything about it yet

[16/07, 11:55] Mongezi: Okay cool

[16/07, 11:55] Mongezi: Wait what is the meeting going to be about?

[16/07, 11:56] Donald: About our project idea. Rylan would've forgotten already about developing website version of our app

[16/07, 11:56] Mongezi: Okay

[16/07, 12:00] Mongezi: Alright I just sent the email

23 July

[23/07, 17:54] Sikhanyiso: I'm done with continuous integration someone can pull the project and run the dummy test I left there and see if it runs

[23/07, 17:55] Donald: ??

24 July

[24/07, 10:26] Donald: Hey guys. Basically what we doing with the website is to replicate our app right? So the question is about the database, in my mind I have been thinking that it would be easier with us by just connecting to the wits lamp instead of starting from the ground. My question is, how are we gonna do that?.. in Android we know that we use a link, but what about here??

who's doing what in terms of user stories. I've done some replica of the login/registration of the app (but if anyone has done it or feels like they wanted to do it, it's chilled, you can takeover) but I am still figuring out a way to link the php files in lamp instead of redoing them.

@Mulisa? what could you say about the backend part? Or anything???

[24/07, 10:28] Donald: How's the booking part going . Do you need a hand?

[24/07, 10:37] MJ: Who is doing that part ??

[24/07, 10:37] MJ: Mulisa said it's possible so maybe he can give us a hand ?

[24/07, 10:37] Donald: ?? thought you doing it

[24/07, 10:38] Donald: Okay????

[24/07, 10:38] MJ: ??? I didn't know ??

[24/07, 10:38] MJ: Let me give it a swing

[24/07, 10:40] Donald: ?? i was misled by this?.. i should stop assuming

[24/07, 10:40] MJ: Ohhh no that was on the android side ???

[24/07, 10:41] Donald: Oh ya I am talking about the last user story on Android?

[24/07, 10:43] MJ: Ohhh okay ?? i did that last part but now I just made it to update events in sort of real time , and I have to add a function that chooses availability since default is unavailable, I'll handle it it's cool ??

[24/07, 10:43] MJ: Rylan said the sprint is on 11 august ?

[24/07, 10:45] Donald: Oh? sweet i was thinking mybe it's on Monday??? nice

[24/07, 10:45] MJ: I asked him today ??

[24/07, 10:45] Donald: ??? great?

[24/07, 10:45] Donald: I was wondering why y'all are chilled??

[24/07, 10:47] MJ: Eish no Mina i was handling some stuff this week, tomorrow im definitely going full force ????

[24/07, 10:48] MJ: @Sikhanyiso? can you help out? I see the code cov build fails but Travis passes, do you know what might be the problem

01 August

[01/08, 13:56] Kaone: Hey guys how's everything working

[01/08, 13:56] Kaone: Out

[01/08, 15:53] Donald: For this week we were doing what Mulisa told us here. We wanna get started by next week and try to move fast and finish early

3 August

[03/08, 08:50] Donald: Hey guys. We can get started with our project , right?
[03/08, 11:32] Donald: ?? where's everyone?... I could be the only one left here doing the project while people are already in other groups?? wonders never end?
[03/08, 11:41] Kaone: Yah sure
[03/08, 11:41] Kaone: I found temporary fix to laptop problem
[03/08, 11:42] Kaone: ? they are sleeping
[03/08, 11:42] Donald: That's great. Would it survive for some months?
[03/08, 11:42] Kaone: Yah I suppose.
[03/08, 11:45] Donald: ?? the website thing won't be easy as we think???.. we really have to work extremely hard together
[03/08, 11:53] Mongezi: eish?
[03/08, 15:10] Donald: Okay I've done some stuff ... You can pull the code from GitHub. There's a home page code just for suggestion. It has top nav menu instead of the bottom nav the one we used in the app.

I'll do the login and registration backend part later tonight.

[03/08, 15:11] Donald: Akere we just copying the app right?.. because that's what i am doing
[03/08, 15:15] Mongezi: yeah that's what we're doing
[03/08, 16:08] Kaone: It's splendid?
[03/08, 16:54] MJ: Niceeee ??
[03/08, 16:55] Mongezi: where would we be without donald?
[03/08, 17:21] Sikhanyiso: Word
[03/08, 18:53] Donald: Ai??? let's push guys????

4 August

[04/08, 09:58] Donald: Oh okay. Thanks
[04/08, 10:08] Donald: If y'all ain't sure about what to do, you can do any part of the project then we'll link everything later on
[04/08, 10:34] MJ: Cool, what are you handling at the moment
[04/08, 10:35] Donald: I am handling the JavaScript backend part for login and registration
[04/08, 10:37] Mulisa: Try the solution I proposed, google something like allow access control origin on php
[04/08, 10:38] Donald: Okay thank you??.
[04/08, 10:39] MJ: Oh okay ??
[04/08, 21:29] Donald: Thanks man. Forgot to update you. It worked

Login and registration is working.

With the home screen. Anyone with a suggestion? Or anyone working on it? You can also check home.html it's my suggestion, but anyone can come up with an alternative

[04/08, 21:32] Donald: I'll be looking at posting if no one is doing that part.

I hope y'all are working too. You've been quiet lately.?

[04/08, 21:53] MJ: I'm still going through some vids online

[04/08, 21:56] MJ: I checked it on my side it looks good man

[04/08, 21:58] MJ: When you sign in done it send you to this home ?

[04/08, 22:01] Donald: No problem.. i thought you doing the event thing?

[04/08, 22:01] Donald: Yes. It's a suggestion?

[04/08, 22:02] MJ: Oh that's done I'll push using that night data, I keep forgetting

[04/08, 22:02] MJ: It looks clean to me ?

[04/08, 22:02] Donald: Okay.. just mention everything you do here so that when we do scrum we copy and paste relevant messages

[04/08, 22:03] MJ: Okay cool

[04/08, 22:03] Donald: Awe??

[04/08, 22:04] MJ: So the log in should take to to the home neh ?

[04/08, 22:10] Donald: Not yet.I am failing to link it with the login for now even thou the path is correct.. i am using

window.location.href = path after a successful login.

[04/08, 22:11] MJ: Oh damn ? eish alright

[04/08, 22:12] MJ: And it didn't work with just window.location ? ?

[04/08, 22:15] Donald: It still takes me to /404 not found page/

[04/08, 22:16] Donald: But if you figure it out along the way sort it out??

[04/08, 22:17] MJ: Cool lemme try it

[04/08, 22:23] Donald: Oh.. the reason was that i am doing that inside the home folder so there is not need to include it in the path

[04/08, 22:24] Donald: It is working. I'll push

[04/08, 22:24] MJ: Okay sweet??

[04/08, 22:40] MJ: What can we show on the home page ?, the blank part

[04/08, 22:44] Donald: Ya man. i am not sure yet.. but if you think of something that's cool?

[04/08, 22:48] Donald: It's just like a landing page neh?

[04/08, 22:48] Donald: Yaa.. you can look some templates on that

[04/08, 22:48] MJ: Yup

[04/08, 22:56] Donald:

<https://www.google.com/url?sa=i&url=https%3A%2F%2Fcolorlib.com%2Fwp%2Flanding-page-templates%2F&psig=AOvVaw1hJmajm9KYQoru890XV4-I&ust=1596660130009000&source=images&cd=vfe&ved=0CAIQjRxqFwoTCJDe-dW3gusCFQAAAAAdAAAAABAD>

[04/08, 22:56] Donald: ???

[04/08, 22:57] MJ: Those are really cool ?????

[04/08, 22:57] Donald: <https://colorlib.com/wp/wp-content/uploads/sites/2/apps-craft-html-app-landing-page-template.jpg>

[04/08, 22:59] MJ: And show some android availability ??

[04/08, 22:59] Donald: Ya that would be cool????

5 August

[05/08, 19:51] Sikhanyiso: ill be doing view questions n transition to answers
[05/08, 22:30] Donald: Posting is working with some minor bugs.. I'll fix that tomorrow.
[05/08, 22:34] Donald: Minor errors are in the backend i sent dummy variables in the database for now.
[05/08, 22:42] MJ: That💎💎s how we start ??
[05/08, 22:43] MJ: But it💎💎s looking good so far ?
[05/08, 23:16] Kaone: It's good man as long as we are striding forward
[05/08, 23:16] Kaone: I'll start learning HTML tonight
[05/08, 23:17] Kaone: I have access to PC periodically

6 August

[06/08, 11:17] Donald: How can one send data from one html page to another??
[06/08, 11:18] MJ: Co ask ?
[06/08, 11:18] Donald: Let's say i wanna send a user id from login to some html page
[06/08, 11:19] Donald: ?? lemme know if you find something
[06/08, 11:20] MJ: Cool ??
[06/08, 11:20] MJ: Nah I💎ll check it out too
[06/08, 12:31] Donald: Oh..i figured out a cool way
[06/08, 12:32] MJ: How ?
[06/08, 12:35] Donald: Give me a sec.. I'll let you know
[06/08, 12:37] MJ: Sho
[06/08, 13:30] Mongezi: i💎ll start working at midnight
[06/08, 13:31] MJ: Anybody able to log in or it💎s just me ?
[06/08, 13:33] MJ: like the sign in is not directing
[06/08, 13:53] Donald: Is it showing the alert message?
[06/08, 13:54] MJ: Yes, but after clicking ok nothing happens on my side
[06/08, 13:55] Donald: Okay.lemme push this one then Fetch
[06/08, 13:55] MJ: cool
[06/08, 13:56] Donald: U can pull
[06/08, 13:57] Donald: Don't mind the fact that post.html is not opening for now. I'm trying to send username to post.html, so i pushed incomplete work
[06/08, 13:58] MJ: its cool now ??
[06/08, 13:58] MJ: no prob
[06/08, 14:04] Kaone: What if we had a class whose access is controlled and it holds important variables.
Essentially, the ones that must be passed through
[06/08, 14:23] Donald: Yea that would work. Which means the class will hold all the information of the logged in user. .. but i dont know how.
[06/08, 14:28] Donald: As for me I used the link and onclick to transfer data through out the site. It's kinda tricky thou. Because it took me a while trying to brainstorm and deleting some stuff which where not working. I managed to complete posting part?? yooh yooh????...

But since it works, and we can store things in the database. We don't have to worry much about it. ??

[06/08, 14:29] MJ: ???

[06/08, 14:29] Donald: I commented in all possible ways so that you can understand the process??

[06/08, 14:29] Donald: I pushed

[06/08, 14:29] Donald: Like how i did it

[06/08, 14:34] Donald: I couldn't thing of a better way. But if you do. You can do it your way?

[06/08, 14:35] Donald: think**

[06/08, 16:49] MJ: Hard coded the profile page and just committed

I💎💎ll give it the student No a bit later but it works for now ??

7 August

[07/08, 09:28] Donald: You should check out sessions

[07/08, 09:28] Donald: https://www.w3schools.com/php/php_sessions.asp

[07/08, 09:29] MJ: Yohhhh ???💎💎????💎💎????💎💎? those would save so much signing in ??

[07/08, 09:30] Mongezi: yeah it would?

[07/08, 09:35] Donald: So in the profile.js, you looking for a way to access the user logged in student number then u sorted right ?

[07/08, 09:36] MJ: Yes

[07/08, 09:43] Donald: The view chats button is going to take you to chats page neh?

[07/08, 09:44] MJ: Yup

[07/08, 09:44] Donald: ?? i am failing to understand them thou eish?... So i am tryna use the same trick i used with posting

[07/08, 09:44] Donald: Do you understand them thou?

[07/08, 09:45] MJ: I💎💎ll check them out just now

[07/08, 09:46] Donald: ??

[07/08, 10:11] MJ: Eish they seem bit complex to understand ?

[07/08, 10:12] MJ: Seems like since we have html and php files separately it💎💎ll be a bit hard to use them ?

[07/08, 10:20] Donald: Ya.. i am trying something. I'm almost there. I'll update you

[07/08, 10:20] MJ: Alright

[07/08, 10:27] MJ: You💎💎re working on the profile php neh? Coz it💎💎s not fetching, just want to be sure

[07/08, 10:28] Donald: Yes

[07/08, 10:28] MJ: I thought I broke it somehow ??

[07/08, 10:31] Donald: ?? i managed to do some crazy stuff again and tweaked the php to take in username instead of studentNo. I know the Username is not unique but since the session thing is dealing it seems to work this way thou?..

I extract the username from the link and used to to access information from the database

[07/08, 10:32] MJ: Ohh okay ???

[07/08, 10:32] MJ: Mina I wanted to try using global variables, I💎💎ll try them when your done on the profile.php

[07/08, 10:33] Donald: That would work too
[07/08, 10:33] Donald: We'll changed if it works out
[07/08, 10:33] MJ: Eish Mina is not fetching ??
[07/08, 10:33] Donald: I haven't pushed
[07/08, 10:34] MJ: Oh okay, pull first I did some minor things on the home
[07/08, 10:34] Donald: Cool
[07/08, 10:36] MJ: Wait did the phps change ? because the android app is not login in
[07/08, 10:39] Donald: ??? oh dear
[07/08, 10:40] Donald: The profile one changed.. lemme change back... Apparently this way wouldn't work?
[07/08, 10:41] MJ: But it worked here though
[07/08, 10:41] Donald: I tweaked the profile.php forgetting that there is android
[07/08, 10:42] MJ: Eish now I'm worried about the login.php because the android doesn't work too ???
[07/08, 10:49] Donald: really.. do u think the headers have something to do with all this?
[07/08, 10:50] Kaone: ???
[07/08, 10:50] MJ: I'm not sure, can you guys check on your side, it could be just me ?
[07/08, 10:51] MJ: But I doubt
[07/08, 10:53] Donald: Yea login doesn't work. But when i created a new account It worked and login in automatically.. idk why login aint working?..i even removed the header
[07/08, 10:53] MJ: It could be an old problem we never noticed
[07/08, 10:54] MJ: And posting works on android so it's just the login
[07/08, 10:55] Donald: Does profile work on android. I am using an old link app
[07/08, 10:56] MJ: No it doesn't
[07/08, 10:56] Donald: Yea, that one I was pretty sure it wouldn't work.
[07/08, 10:57] MJ: Oh okay ??
[07/08, 10:57] Donald: Since I am used username on the website instead of studentNo. I'll change it back
[07/08, 10:57] Donald: I am using
[07/08, 10:57] MJ: Oh okay and then I'll try using the global variables method
[07/08, 10:59] Donald: Now it should work?
[07/08, 10:59] MJ: Eish not yet
[07/08, 11:08] Donald: It's working this side .. using your old way
[07/08, 11:10] MJ: Eish for me it's not, on both platforms
[07/08, 11:11] MJ: Oh okay I see the problem, you forgot to change back the StudentNo to studentNo
[07/08, 11:11] Donald: ???
[07/08, 11:18] Sikhanyiso: My vodacom was crappy yesterday, I did list question, n search question, ill do the logic fr liking a question then ill hopefully move to view answers
[07/08, 11:28] Mongezi: okay i'm doing the chat function, is that cool?
[07/08, 11:28] Donald: No problem?
[07/08, 11:40] MJ: Ohhh okay cool, I came across local storage, just didn't know how to use them but thanks for the lead ???????
[07/08, 11:44] Donald: ???
[07/08, 11:46] MJ: Wayyy ahead of you ????
They work nice ??????
[07/08, 11:50] Donald: ? now the profile is sorted neh?

[07/08, 11:51] MJ: ??yes

[07/08, 11:51] MJ: I💎💎ll finish the home page and move on to show available events/slots

[07/08, 11:52] Donald: Much better...we almost done with the web functionality?.

[07/08, 11:52] MJ: That💎💎s what I💎💎m seeing ???

[07/08, 12:49] Kaone: Sure note taken

[07/08, 13:29] Sikhanyiso: we sort of need new diagrams they are not the same

7 August

[10/08, 16:38] Donald: I managed to host it locally using xampp. I guess we safe for now

[10/08, 16:39] MJ: Did you copy all the tables ?

[10/08, 16:42] Donald: Yes and scripts.. I only copied for the user stories we going to present.

[10/08, 16:46] MJ: Ohh okay ??

[10/08, 16:46] MJ: Thanks man ????

[10/08, 16:47] Donald: ?? awe bro??

[10/08, 17:39] Sikhanyiso: can someone who is free help me with with activity diagrams
